

# APD StormSlab® 220D TANKS CLASS H1 SOILS - SINGLE STOREY APD LTD

REF NO: 7527-H1(1)-220D

### 1.GENERAL NOTES:

- 1.1 All work to be in accordance with New Zealand Building Code. All codes refer to the current edition
- plus all amendments.

  1.2 These drawings are to read in conjunction with the drawings and specification of other consultants e.g. Architect, Mechanical, Building Services, Electrical etc. The Principal Consultant must be notified of any discrepancy.
- No dimensions are to be scaled from these drawings. All dimensions to be established on site.
- 1.4 During construction, the structure shall be maintained in a stable state by means of temporary propping, bracing and guying and no part shall be overstressed.
- 1.5 During construction, all suspended floors and beams shall be proped U.N.O. for 28 days minimum.
- 1.6 Temporary propping is the responsibility of the contractor.
- 1.7 If during construction any part of the work shows signs of distress, excessive deflection, conflict of components or other indications of a problem, the Contractor shall immediately notify the Engineer who shall investigate and issue such instructions as are considered necessary.
- 1.8 Precast unit end seating shall be to manufacturer recommendations U.N.O.

### 2. CONCRETE NOTES :

- 2.1 Materials and workmanship to be in accordance with N.Z.S. 3109.
- 2.2 For minimum cover to principal reinforcement refer to NZ 3101 clause 5.11.3.3 or shall be minimum:

	Member	Against natural ground	Against boxing or screed conc.	Exposed to weather	Not exposed to weather
	Foundations, Beams, Columns (Principal reinforcing)	75mm	50mm	50mm	35mm
ຊ່	Clump and mix decian chall be:				

2.3 Slump and mix design shall be

Member	Concrete slump (max.)	Concrete mix design
columns, beams floor slab on ground suspended slabs	120mm 80mm 80mm	refer to concreter specification

- 2.4 No holes or chases are to be made in concrete members other than those shown on drawings.
- 2.5 Concrete grades:
- 25MPa at 28 Days
- Floor slab on grade:
  - Suspended slabs, beams N/A

  - 30MPa at 28 Days Precast Panels
  - 25MPa at 28 Days Masonry infill:
- 2.6 Allowance is to made for all cast-in cleats and bolts for fixing roof and floor beams etc.
- 2.7 Slabs on ground shall be sawcut 1/4 of slab thickness to approved dimension between 24 and 48 hours after pouring unless otherwise instructed. Alternate wires and/or bars are to be cut 40mm from joints and no laps are to occur at joints. Alternative construction may supersede these details ie. pours in panels or strips. Sawcut grids 5000x5000 maximum unless otherwise noted.
- 2.8 Suspended slabs and beam are likely to have a hog (precamber). This must be allowed for in construction and setting out of floor levels and in calculation of concrete topping volumes.
- 2.9 Suspended floors are to be poured to thickness and NOT to a level.
- 2.9a All concrete that is to be poured against is to be scabbled to 5mm amplitude

### 3. REINFORCEMENT NOTES:

- 3.1 Reinforcement is shown diagrammatically and is not necessarily shown in true projection
- 3.2 Reinforcing has been designated;
- (a) High Yield deformed grade 500E
- (b) High Yield plain grade 500E (c) Mild Steel deformed grada 300E
- (d) Mild Steel plain grade 300E
- (fv = 500 Mpa) e.g. D20H (fy = 500 Mpa) e.g. R20H (fy = 300 Mpa) e.g. D16

25MPa at 28 Days, min tensile strength 3.5MPa U.N.O.

- 3.3 Laps in concrete reinforcement to be made only in the positions shown and shall be; (unless shown of the positions shown and shall be; (unless shown of the positions) D10 D12 D16 D20 D25 D32 D40 Deformed bars 400 480 640 800 1000 1250 1600 Grade 500 650 800 1050 1300 1650 2100 2600
- 3.5 Reinforcement mesh laped with a minimum of 2 cross wire but not less than:
  - SE82-SE92 Mesh lap length 400mm SE62-SE72 Mesh lap length 300mm;
- 3.6 Where laps are not shown on the drawings, reinforcement in slabs and walls may, if approved, be lapped at random in a staggered pattern.
- 3.7 No welding, heating or reverse bending of bars is permitted without the consent of the engineer.
- 3.8 Reinforcement in slabs is to be supported on stools or other approved methods starters to be
- tied in place before pouring. 3.9 All steel to be complient with AS/NZS 4671 or equivalent. Steel reinforcing material shall be ductility class "E"

### 4. BLOCKWORK NOTES:

- 4.1 All blockwork shall be under the direct supervision of a registered Mason who shall provide continuous inspection. All work shall comply with N.Z.S. 4210 Masonry Materials and Workmanship.
- 4.2 Masonry is to be constructed by the 'High Lift' method with clean out ports at every vertical bar and at the bottom of every lift. Bottom course to be open ended bond beam blocks placed upside
- 4.3 Fix vertical bars before laying blocks and place horizontal bars as laying proceeds.
- 4.4 All cells filled unless otherwise noted.
  4.5 Concrete for filling blockwork to have a compressive strength as shown in CONCRETE note 2.5 above and to have expanding admixture added on site and mixed immidiatly prior to placing.

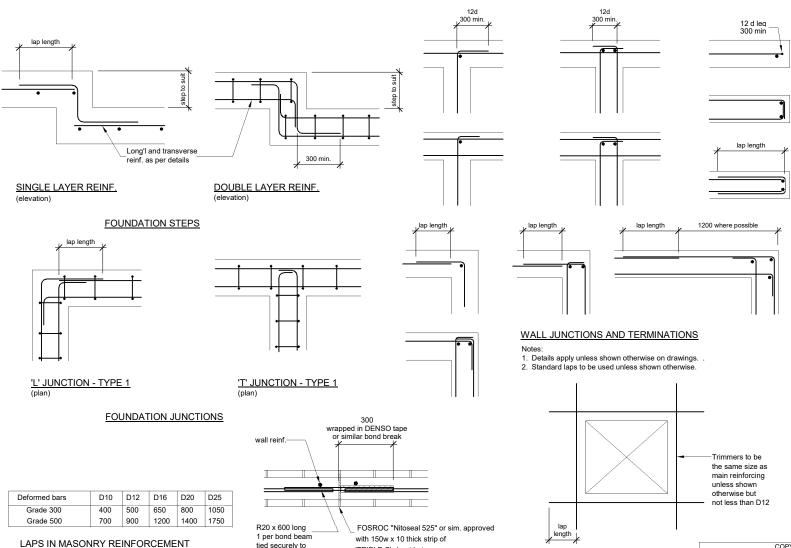

### 5. STEELWORK NOTES:

- All structural steelwork to be grade 300 unless noted otherwise complying with the appropriate standards listed in N.Z.S 3404.
- 5.2 Bolted connections to be made with grade 8.8 bolts, snug thightened, to A.S.1252. with 2mm clearance to holes unless shown otherwise.
- 5.3 Bolt threads to be excluded from shear plane.
- 5.4 All welding to be arc welding in accordance with AS/N.Z.S. 1554.1. All welds to be 6mm fillet continuous unless noted otherwise.
- 5.5 Do not paint steelwork that is to be encased in concrete.
- 5.6 This set of structural steelwork drawings show the design intent. Shop drawings remain the
- esponsibility of the contractor. 5.7 All holding down bolts and other fixing devices are to be set by a template and checked for level
- and position before concreting.

  5.8 Check and verify all dimensions and levels on site before commencing fabrication of any structural
- 5.9 Unless shown otherwise, all baseplates shall bear directly on 25 +/- 5mm of dry pack mortar.
- 5.10 Washers tapered where necessary, are to be used under all nuts & bolt heads5.11 All R.H.S members are to be capped and all joints sealed.
- 5.12 Where items are to be hot dip galvanised, allow for tolerances, vent holes etc. as necessary
- 5.13 All welding symbols shown on the drawings are in accordance with N.Z.S. 1100.501:1985.

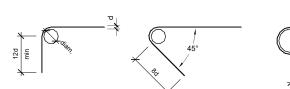

### 6. INSPECTION NOTES:

6.1 Adequate notice is required by the Engineer for inspection of the works. The Contractor must be satisfied that the works have been completed in accordance with the drawings and specification before confirming an inspection by the Engineer.

'TRIPLE-S' sheet between.
